The NAB needs to deal with the fact that they will never be able to provide the convenience, product, or service that satellite radio can offer. The instant traffic and weather is such an invaluable tool when driving. Sure, radio stations have traffic reports, but that's every 10 mins, I use the traffic and weather station everyday as soon as I get in my car so that I know how to plan my route to work. As an XM radio user, they are providing services that are useful to me each and everyday. NAB's petition of 04-160 is petty and needs to be rejected because it shouldn't always be about the money, it should be how to make the consumer more comfortable and happy with the services we pay for. I pay for this service because I HATE listening to those damn commercials every 2 songs and there is so much variety on the radio. It's the same concept as having cable TV in your homes, it's cable radio for your car. There are more pressing matters in this country right now, why are the people we elect into office wasting time dealing with issues like this.
